

Department of Industrial Engineering

Degree program: Environmental Technology & Development (B. Sc.)

COMPULSORY MODULE

Module number: WI-B.421

Lecture script:

Water purification

Lecture given by:

PROFESSOR P. ENGELKE

Contact: **Paul.Engelke@eah-jena.de**

ECTS: **6**

Work load: **75 h of contact hours**
105 h of self study

Table of contents

List of figures	VI
List of tables	VIII
List of acronyms	IX
1 Water supply	1
1.1 Introduction	1
1.2 Freshwater consumption	2
1.3 Applications	4
1.3.1 Agricultural water supply	4
1.3.2 Industrial water supply	5
1.3.3 Municipal water supply	6
1.4 Global water shortage	7
1.4.1 Access to secure drinking water	7
1.4.2 Drinking water supply and infant mortality	8
2 Hydrology	10
2.1 Global Water Cycle	10
2.1.1 Precipitation	11
a Defintion and Classification of Precipitation	12
a.1 Orographic Precipitation	12
a.2 Convective Precipitation	13
a.3 Cyclonic Precipitation	13
b Measurement of Rainfall: Site Selection Criterias	14
2.1.2 Evapotranspiration	15
a Definition	15
b Measurement of evapotranspiration (ET)	15
2.1.3 Infiltration	15
2.1.4 Runoff	16
a Factors Affecting Runoff	16
b Maximum Flood Discharge (MFD)	16
3 Aquifers	18
3.1 Types of Aquifers	19
3.2 Properties of Aquifers	20
3.3 Darcys Law	21
4 Drinking water generation	24
4.1 Well Designs	24
4.1.1 Dug wells	24
4.1.2 Boreholes	27

4.1.3	Horizontal filter wells	29
4.2	Groundwater Collection: Groundwater Dams	31
4.2.1	Types of Groundwater Dams	31
4.3	Bank filtration	33
4.4	Springwater	34
5	Chlor-alkali electrolysis	36
5.1	Product application	36
5.2	Fundamentals of Electrolysis	38
5.3	Cell types	39
5.3.1	Amalgam cell	39
5.3.2	Diaphragma cell	41
5.3.3	Membrane cell	44
5.4	Electrolytic Disinfection	47
6	Water Hardness	49
6.1	Calco-carbonic acid equilibrium	50
6.1.1	Law of mass action	51
6.1.2	Temperature dependency of equilibrium constants	53
6.1.3	Interpretation of equilibria constants	55
6.1.4	Calcite-aggressive and calcite-precipitating water	56
6.1.5	Tillmans curve	57
7	Ion exchange	59
7.1	Ion-exchange resins	59
7.2	Resin types	60
7.2.1	by backbone crosslinking	60
a	by functional groups	61
a.1	Strong-Acid Exchangers	62
a.2	Weak-Acid Exchangers	62
a.3	Strong-Base Exchangers	63
a.4	Weak-Base Exchangers	64
8	Irrigation	65
8.1	Introduction and Geography	65
8.1.1	Demographics and Settlement	65
8.1.2	Natural Resources	65
8.2	Water Scarcity and Challenges	67
8.2.1	Climate Characteristics	67
8.2.2	Main Water Sources	67
8.2.3	Population and Economy	68
8.3	Agriculture	69

8.3.1	Agricultural Land Classification	69
8.3.2	Development of New Lands	69
	a 1. West Delta Region Project	69
	b 2. North (and Central) Sinai Development Project	69
	c 3. New Valley Project (Toshka)	69
8.3.3	Profile of the Farms	70
	a Land Tenure and Legal Framework	71
	a.1 Effect of the legal framework onto the old lands	71
	a.2 New Lands	71
8.3.4	Fragmentation in the Old Lands	71
8.3.5	Agribusiness in the New Lands	72
8.4	Irrigation Management	72
8.4.1	Water Resources Classification	72
8.4.2	Distribution Infrastructure	72
8.4.3	Irrigation Techniques	73
	a Flood Irrigation (Old Lands)	73
	b Modern Irrigation (New Lands)	73
	c Comparison	75
9	Activated Carbon	76
9.1	Trace Substances	76
	9.1.1 Regulatory Classification: Priority and PBT Substances	77
	9.1.2 Status and Advanced Treatment Requirements	77
	9.1.3 Pathways	78
9.2	Activated Carbon	78
	9.2.1 Synthesis	79
9.3	Dosing	81
	a Powdered activated carbon: Ulm process	81
	b Granulated activated carbon	82
	b.1 Breakthrough	83
10	GEH	85
10.1	Granular Ferric Hydroxide (GEH®)	85
	10.1.1 Production and Manufacturing	85
	10.1.2 Physical Properties and Standards	86
	10.1.3 Fields of Application	86
10.2	Process	86
	10.2.1 Adsorber Design	86
	a Vessel Construction and Equipment	86
	b Internal Filter Configuration	87
	10.2.2 Filling	87
	10.2.3 Initial Backwashing and Commissioning	88

10.2.4	Disinfection of the Adsorber Unit	89
10.2.5	Operational Parameters and Hydraulic Performance	90
.1	Process Constraints	90
.2	Pressure Drop Dynamics	90
10.2.6	Operational Backwash	91
10.2.7	Replacement and Disposal of Exhausted GEH®	92
10.3	Regeneration	94
10.4	Application: Arsenic Removal	94
10.4.1	Regulatory Background and Chemical Speciation	94
11	Filtration	98
11.1	Introduction	98
11.1.1	Transport mechanisms	98
11.1.2	Removal Mechanisms	98
11.2	Settling Filtration	99
11.2.1	Rapid Gravity Filtration (RGF)	99
a	Filtration process	99
11.2.2	Slow Sand Filtration (SSF)	100
a	Filtration media	101
b	Disadvantages	101
c	Filtration mechanism	101
d	Process	101
11.3	Catalytic filtration	103
11.3.1	Iron(II) Filtration	103
11.3.2	Iron(III) Filtration	103
11.3.3	Manganese(II) Filtration	104
	Bibliography	106
	Index	110
